

Lecture Series: Brains for Everybody

Neuroscientist Manuela Macedonia at the Ars Electronica Center Linz

Deep Space LIVE: "The Key to the Brain" / Thursday, June 16, 2011, 8 PM

(Linz, June 13, 2011) "The Key to the Brain," the next Deep Space LIVE event on June 16 at 8 PM, will focus on leading-edge research on the brain. Visitors can look forward to incredible, high-definition graphic insights into how the human brain works, an overview of methods used in the neurosciences, and anecdotes from scientist Manuela Macedonia's daily life on the job at the Max Planck Institute in Leipzig. "The Key to the Brain" is the third and last (for now) installment in this very successful series of presentations about the human brain. It will resume in autumn.

Advances in Brain Research

More and more people are finding out about the exciting advances being made in brain research. The main reason for this heightened interest is the modern imaging technology that lets us see how the brain actually works. These diverse and colorful depictions of neuronal activities have heightened people's curiosity and elicited fascination for phenomena that were previously hidden from our view. In May and June, the Ars Electronica Center Linz is hosting a lecture series about the brain by Manuela Macedonia, a neuroscientist on the staff of the Max Planck Institute Leipzig. She also initiated the "Neuroscience for You" project that makes authoritative information about brain research available to laypeople.
