

Deep Space LIVE: Volcanoes

Thursday, April 3, 2014 / 8-9 PM / Ars Electronica Center

(Linz, April 1, 2014) What are volcanoes, actually? How are they formed, and what effects do volcanic eruptions have on nature and on human beings? Birgit Hartinger, an infotrainer in the Ars Electronica Center, will answer these and other questions at the next Deep Space LIVE this coming Thursday, April 3rd. She'll also discuss the webcams that have been set up at hundreds of locations worldwide to monitor volcanoes and to make it possible to observe their huge eruptions live. Plus, there will be screenings of photographs of volcanic ash probes. These images taken with the electron microscope in the BioLab at the Ars Electronica Center reveal fascinating details.

Deep Space LIVE

The Ars Electronica Center is now hosting a Deep Space LIVE event every Thursday (except holidays) at 8 PM. Each presentation will feature ultra-high-definition imagery in 16x9-meter format and will be accompanied by expert commentary, entertaining stand-up repartee, and musical improvisation. Whether great works from the history of art, space travel, journeys of discovery in the Nanoworld, or a live concert is what you've come to behold, Deep Space LIVE stands for enlightening entertainment amidst breathtaking worlds of imagery. Admission is €2. Holders of a valid Museum ticket are admitted free of charge.
