# STREAMS IN THE VEINS

What Is The Difference Between Influencing And Controlling Each Other?

'Streams in the veins' conducts a piano ensemble involving a human pianist and plants. During this performance, the transmission of sound from various pianos leads both agents, humans and plants, into a continuous cycle of communicative improvisation. Through our attempts at musical sessions with plants, we were able to experience the temporal differences in the umwelt of plants compared

to humans, such as their distinct response times to external stimuli and the resulting differences in perceptual worlds. Furthermore, it is notable that this project, executed by members with diverse cultural and professional backgrounds, is an artistic research, which itself serves as an analogy to our central theme.
